(+212) 6 3982-5295, Casablanca, Morocco

SUMMARY

Software Developer and Data/AI Engineer with strong experience in full-stack web development, computer vision, and machine learning. Skilled in designing scalable applications and AI-driven analytics tools that transform data into actionable insights. Adept at building intelligent systems, from web platforms to predictive models, using Python, Java, and modern frameworks. Passionate about applying technology and data to solve real-world challenges.

PROFESSIONAL EXPERIENCE

February 2025 –
June 2025

Royal Moroccan Football Federation & MyTeam Solutions – Rabat (Morocco)
AI & Data Engineer / Software Developer (Intern)

- Designed and developed a full pipeline for automated statistics collection, AI-based video analysis, and machine-learning-driven scouting.
- Implemented YOLO + tracking algorithms to detect and follow football players/ball, enabling precise event tagging and performance insights.
- Built a data-driven scouting module (PCA, K-Means) clustering football player profiles from StatsBomb datasets to optimize recruitment.
- Delivered a functional web interface combining Flask, Plotly dashboards, and MongoDB for visualization of match analytics.

September 2022 –
January 2025

ALTERNATIVE-IT – Casablanca (Morocco)
Senior Technician / Full-Stack Developer

- Contributed to development of the HR missions module for Morocco's General Directorate of Water, improving task management efficiency (Symfony + Cordova).
- Led full-stack implementation of a Hydraulic Monitoring System for the Directorate of Hydraulics to track dams and stations in real time.
- Designed RESTful APIs and optimized SQL queries, reducing backend response time by 30 %.

May – June 2022

NJT-GROUP – Marrakech (Morocco)
Full-Stack Developer (Intern)

- Developed a responsive platform connecting skilled trades professionals and clients, including booking and rating modules (Laravel + Vue.js + MySQL).
- Focused on UX/UI accessibility and data security for small-business digitalization.

May – Jun 2021

ALTERNATIVE-IT – Casablanca (Morocco)
Web Developer (Intern)

- Assisted in front-end enhancement and database integration for a transport-management web system (Symfony + PostgreSQL).
- Debugged and tested modules in collaboration with senior engineers.

EDUCATION

September 2023 – June 2025	Specialized Master's in Digital Transformation and Sports Technologies <i>Institute of Sport Sciences, Settat (Morocco)</i>
September 2021 – June 2022	Professional Bachelor's in Web Programming Technology <i>Faculty of Sciences Semlalia Marrakech (Morocco)</i>
September 2019 – June 2021	University Diploma of Technology (DUT), Computer Engineering <i>Higher School of Technology (EST), Laayoune (Morocco)</i>
September 2018 – June 2019	Baccalaureate in Physical and Chemical Sciences (French Option) <i>RYAD School, Casablanca (Morocco)</i>

PROJECTS

AI-Based Football Match Analysis System (Python, YOLOv8, DeepSORT, Streamlit)

- Built a deep learning application to detect and track players and the ball in match videos.
- Implemented team identification and tactical field mapping using computer vision.
- Built a Streamlit interface for visualization of detections and match analytics.

Automated Football Data Collection & Dashboard (Python, Plotly, Pandas, Web Scraping)

- Designed a data pipeline to automatically collect live statistics from a football league's websites and APIs.
- Processed and analyzed match data to compute key performance indicators (KPIs).
- Built an interactive dashboard using Plotly for real-time monitoring and data-driven decision making.

Physical Condition Assessment Web App (Symfony, Python, OpenCV, MediaPipe)

- Created a web platform for automatic evaluation of students' physical condition using computer vision.
- Implemented trained models to analyze movements and generate personalized fitness feedback.

University Timetable Management System (Angular, Node.js, MongoDB)

- Developed a dynamic scheduling system for managing class timetables within a university.
- Implemented teacher and course modules allowing CRUD operations and conflict-free scheduling.

Professors' Academic Sharing Platform (Symfony, PostgreSQL)

- Built a collaborative web application for professors to share research papers, academic works, and teaching materials on a single platform.
- Integrated secure authentication and content management features for easy publication and retrieval.

SKILLS

Programming: Python, Java, JavaScript, PHP, SQL, PL/SQL, HTML, CSS, C, C++
Frameworks & Libraries: Laravel, Symfony, Spring Boot, Angular, Vue.js, Cordova, Node.js

AI & Machine Learning: YOLO, OpenCV, MediaPipe, Scikit-learn, TensorFlow, Keras, PCA, K-Means

Data Analysis & Visualization: Pandas, NumPy, Plotly, SPSS, R/RStudio, XLSTAT

Databases: MySQL, PostgreSQL, Oracle

Tools & Environments: Eclipse, Visual Studio, Jupyter, Git/GitHub, Figma, Docker

Soft Skills: Analytical thinking | Problem solving | Collaboration | Adaptability | Agile methodologies
